L92902, L92001, L92850, L92904, L92901, L92002, L92781, L92780

Issue: Oil based resins are the raw materials in manufacturing polypropylene absorbent pads & rolls. Responsible facilities are changing their buying practices to become more environmentally conscious. New products are being developed to meet this ever growing demand.

Solution: The use of recycled absorbents will support your efforts toward environmental sustainability. Be prepared with earth friendly products readily available to control daily leaks and spills in your facility.

Description: Oil-Dri® Resorb™ Pads & Rolls should be a part of every environmentally conscious spill control plan. These cotton based materials are an excellent industrial absorbent. Blue material is 'universal' and can be used to absorb all fluids and is easily wringable for re-use. White 'Oil Select' material can be used to separate petroleum based fluids from water. Hydrocarbons absorb into the natural fibers as water can be easily extracted from the material.

Features & Benefits:

- Earth Friendly - Made from 85% post-industrial recycled cotton fibers
- Natural Resource - Cotton based material is a natural alternative to polypropylene
- Capture & Recycle Liquids - Water and hydrocarbons can be separated and extracted
- Hand Wringable / Re-usable - Spongelike absorption. Squeeze out fluids and use it again.
- Versatile - Material is soft, pliable and easily cuts to fit any tight spot
- Fire Resistant - Passes the ASTM E84 flame spread test

Product Specifications:

- Composition: Cotton Based Fibers
- Color: White: 'Oil Select' can be used to separate oil from water
Blue: 'Universal' absorbs all liquids excluding acids
